

Temporary Food Service Application Packet

Licensing Process

- 1) Read this entire packet.
- 2) Complete the license application form, drawing (on the back of the license application), and all questionnaire forms. It is **very important** that you correctly write your operation start and end times on the application form!
- 3) Submit above items with the appropriate license fee (**\$30.00 per day**) at least 10 days prior to your event. We suggest that you make copies of your application questionnaire forms and drawing for use at your event.
- 4) Miami County Public Health will either approve the application or contact you with questions, comments, recommendations, or concerns.
- 5) A Public Health representative will perform an inspection of the temporary food service operation during the hours of operation of your event.* If your food service is not set up during the operation start and end times that you write on the application form, you may be subject to a re-inspection fee.
- 6) Upon successful completion of the inspection you will be issued the temporary food service operation license. The license must be posted in plain-view for customers.

* Note: Miami County Public Health will attempt to inspect the operation near the beginning of the operational period; however, this is not always possible due to the number of inspections that we perform. You are **not** required to wait for the inspection before you begin to prepare and serve food.

This packet is designed to be a guide highlighting many important issues when conducting a temporary food service operation. However, the information contained within this packet does not contain all of the applicable rules for food service operations. This packet is a short summary of the Ohio Uniform Food Safety Code. This code can be found in the Ohio Administrative Code Chapter 3717-1 and is available on our website. Any and all rules found in this Chapter are applicable to temporary food service operations and will be enforced.

Frequently Asked Questions

What is a temporary food service operation?

- A temporary food service operation is defined as any place that prepares and/or serves food, for a charge or required donation, for a period of no longer than 5 consecutive days.

When do I need a temporary food service operation license?

- If you sell food in Miami County you are required by Ohio law to apply for and obtain a license from Miami County Public Health.
- A temporary license is required for any place, location, site, or separate area where food is prepared or served for a charge or required donation. Food is defined as any raw, cooked, or processed edible substance used or is intended for use in whole or in part for human consumption; "food" includes ice, water, beverages, ingredients, and chewing gum.

How much does a temporary license cost?

- The fee for a temporary food service operation license is **\$30.00 per day**, not to exceed 5 days. County Agricultural Fairs may exceed 5 days according to Ohio law.

How many temporary licenses can I get each year?

- You may apply for up to 10 temporary licenses per year.

When do I have to submit the application and fee?

- **The application, supporting documents, and the license fee must be received by our office at least 10 days before the event takes place.** This allows Miami County Public Health time to review applications, prepare licenses, and schedule inspections for the date(s) of the temporary food service operation. *If we do not receive the application and fee at least 10 days prior to the event, your application will be refused.* If you sell food without a temporary food service operation license, you will be violating Ohio law and Miami County Public Health will take the appropriate legal actions.

Do I have to read this entire application packet each time I apply?

- We strongly recommend that you do. This packet is periodically revised and information is often added and/or removed (note the revision date at the bottom left corner of the packet). Anyone working at your temporary food service operation should read this entire packet.

Food Safety Requirements

Person-In-Charge Responsibility

- The Person-In-Charge (PIC) is directly responsible for the safe and sanitary operation of the temporary food service operation to protect public health. You are responsible for complying with all applicable food service codes outlined in the Ohio Administrative Code (OAC) and the Ohio Revised Code (ORC) and training your support staff/volunteers.
- You can download a copy of the Uniform Food Safety Code at our website: http://www.miamicountyhealth.net/EH/eh_FoodSafety_Main.htm
- The PIC must be able to identify the seven major food allergens and any foods they sell/serve that contain the allergens. The major food allergens are: milk, egg, fish (including crustaceans), tree nuts, wheat, peanuts, & soybeans.
- The inspecting health official will “test” the PIC's knowledge of food safety, focusing on items in this packet. The PIC should be capable of answering questions about the rules, requirements, and temperatures in this packet. If the health official determines during the inspection that the PIC is not knowledgeable of the food safety rules or presents a danger to public health, the license may be suspended or revoked.

Hand Washing

- A temporary hand washing station must be provided.
- Flowing warm water must be provided. There are no exceptions. We suggest that you use a coffee urn to heat water. Once heated, pour the hot water from the coffee urn into a large Igloo-type cooler and add cool water to achieve warm water near 100°F.
- As soon as food workers enter the booth they **must** wash their hands **before** preparing food.
- Hand soap and paper towels must be provided at the hand wash station. You may not use cloth towels for hand drying.
- Hand sanitizer is not a substitute for hand washing. You may only use hand sanitizer **after** washing your hands.
- The hand wash station should be labeled “Hand Wash Only.”
- The hand washing station must be set-up as shown below:

Hand washing must be done throughout the day, especially:

After...	Using the restroom Coughing or sneezing Smoking Handling money Eating or drinking Handling raw foods Touching trash
Before...	Starting to prep food Putting on gloves Touching clean items

1. Flowing warm water cooler
2. Soap (liquid or bar)
3. Paper towels
4. Catch basin for waste water
5. Table

Dish washing

- A temporary dish washing station must be provided.
- All dishes and utensils must be washed, rinsed, sanitized, and air-dried before use, during the day when they become unclean, and at least every 4 hours.
- Dish washing must be done using a three-compartment basin setup. We suggest that you use 3 plastic basins, large enough to immerse your largest dish/utensil.
- **You may not wash dishes at your hand wash station, nor hand wash at the dish wash station.**
- Warm water and dish soap must be provided for washing.
- An approved sanitizer must be used. The most common sanitizer is unscented household bleach (chlorine). Using 1 cap-full of regular unscented bleach per one gallon of water is equal to about 100ppm free chlorine.
- The dish washing station must be set-up as shown below:

Clean Water

- All water used in the temporary food service operation must be obtained from an approved source. An approved source is considered a public/municipal/city water supply or commercially bottled water from an approved source. **Do NOT use water from a private water well.**
- Water connections through a community spigot must be protected from the backflow of water with an ASSE-approved backflow prevention device, such as ASSE 1011. You can usually find this type of approved backflow device in the hardware section of many stores.
- Water hoses, if used, must be food-quality or drinking water quality hoses (NOT green garden hoses). Approved hoses can be clear – or – white with a blue stripe.

Waste Water and Solid Waste

- You should collect and dispose of waste water (gray water) from your hand wash station, dish wash station, fruit/vegetable rinse station, and any other place where water is used.
- Waste water must be collected and disposed of into an established and approved sewer system or community collection basin.
- Waste water may not be disposed of into a storm sewer drain. Storm drains convey water to our local waterways such as rivers, streams, and creeks.
- Waste water may not be dumped onto the ground or into other unapproved drainage ways.
- Trash must be disposed of in trash cans and transported to an approved waste disposal area.

Food Preparation

- All food preparation must occur **at the site** of the licensed temporary food service operation.
- **You may NOT prepare food at home or another unlicensed location and then transport it to the event.**
- Raw fruits and vegetables must be thoroughly rinsed with clean water prior to preparation or use. You must provide flowing water to properly rinse all fruits and vegetables. If you are using fruits or vegetables, you must provide a similar setup to the hand wash station – flowing water with a catch basin. You may not use your hand wash station as your fruit and vegetable rinse station.
- All food preparation must be done on cleanable surfaces such as cutting boards.

Food Protection

- All areas of the temporary food service operation must be protected from the weather and environment using a tent, covering, or building. Protection must be extended to (at least) the food preparation areas, service areas, the hand wash station, and the dish wash station.
- Food must be kept covered and away from areas of contamination.
- Food must be kept away from the hand wash and dish wash stations.
- Food preparation areas must be set-up near the back of the food operation, away from the public.
- All food, drink, and service utensils must be kept at least 6 inches off the ground. Utilize tables, crates, boxes, pallets, skids, or other acceptable means to keep items off the ground.
- Workers may not smoke or eat anywhere inside the food booth.
- All food should be stored securely to prevent intentional and unintentional contamination. Food should only be accessible to authorized food workers – not to the general public.

Food Handling

- Food workers/volunteers may not touch exposed, ready-to-eat foods with their bare hands. Ready-to-eat foods are foods that will not be cooked before serving or have been cooked. Examples of ready-to-eat foods are sandwich buns, cheese, fruits, vegetables, etc.
- Food handlers may use clean utensils, deli tissue, spatulas, tongs, or single-use gloves to handle ready-to-eat foods.
- Single-use gloves are not a substitute for hand washing. Food handlers must continue to wash their hands throughout the day even though they may be using single-use gloves. Food handlers must wash their hands frequently - especially after changing gloves, after touching money, and before beginning food preparation. **Latex gloves are no longer permitted in food service operations.**
- All food workers must be healthy and not experiencing stomach-flu-like symptoms within the last week.
- Food handlers shall effectively restrain hair by wearing hair restraints such as hats, hair coverings or nets, or beard restraints that are designed and worn to prevent contamination of exposed food.

Thawing

- Food may not be thawed by setting the food out at room temperature. Food found thawing out at room temperature must be discarded.
- If necessary, thawing must be done by:
 - 1) Refrigeration: This is the best way to thaw foods. Move the frozen food from a freezer to a refrigerator that is holding 41°F or lower. However, this may take several days.
 - 2) Cooking: Food may be thawed as part of the cooking process as long as the food reaches the minimum internal cooking temperature of 165°F.
 - 3) Microwave: If the food is cooked immediately, it may be thawed in a microwave.

Cooking and Heating Foods

- All food must come from an approved, licensed source. If you have a question about a source, please contact Miami County Public Health.
- You must provide at least one metal-stem thermometer for checking temperatures. The OAC 3717-1-4.2 requires the use of a small-diameter probe thermometer that is designed to measure the temperature of thin foods. Thin food examples are: cheese, hamburgers, chicken and deli meats. Please check this link for specific examples of these thermometers: www.miamicountyhealth.net/EH/eh_FoodSafety_Main.htm
- The metal-stem of the thermometer must be washed, rinsed, and sanitized before and after placing it into a food to check the cooking or heating temperature.
- Foods not meeting the proper cooking or heating temperatures must be discarded.
- Cook all foods to at least 165°F. Foods such as burgers, chicken, pastas, and vegetables should be cooked to this temperature.
- Pre-cooked foods that are pre-packaged from a commercial manufacturer (such as Gordon Food Supply) should be heated to at least 135°F. The best example of this is hot dogs.

Keeping Food Hot and Cold

- Holding temperatures, both hot and cold, must be monitored with a metal-stem thermometer. Your thermometer should be capable of checking both hot and cold temperatures.
- Cold foods must be held at or below 41°F.
- After being cooked or heated, hot foods must be held at or above 135°F.
- Store all raw cold foods in a separate cooler (for example, store raw hamburger patties on ice in one cooler and store lettuce and cheese on ice in a separate cooler).
- Foods not meeting the proper holding temperatures must be discarded.

**COOK to
≥165°F**

**HOLD at
≥135°F or ≤41°F**

Temporary Food Service Operation Pre-operational Checklist

**Use this checklist to make sure that you are ready to operate your food service
BEFORE you begin serving food!**

- Hand wash station setup correctly – warm water, soap, paper towels, and catch basin.
- Workers/volunteers are frequently using the hand wash station.
- Hot holding temperatures at or above 135°F.
- Cold holding temperatures at or below 41°F.
- Gloves, utensils, etc. used – no bare-hand contact with food.
- Hair-restraints for workers handling or working around food.
- Good hygienic practices in place.
- All workers/volunteers are healthy and have not been experiencing any stomach-flu-like symptoms within the last week.
- Dish wash station (for utensils) setup correctly – warm wash, rinse, sanitize, & air dry.
- Sufficient sanitizer levels.
- All food and utensils at least 6 inches off the ground/floor.
- Metal-stem thermometers available to monitor temperatures.
- Tent or building covering the entire food service operation area.
- Gray/waste water disposed of properly.
- Person-In-Charge knowledgeable of food safety rules.

APPLICATION TO CONDUCT A TEMPORARY (check only one)

HEA 5331 (Rev 9/00) Ohio Department of Health

- Food Service Operation
- Retail Food Establishment

INSTRUCTIONS:

- 1) Complete the applicable sections.
- 2) Sign and date the application.
- 3) You may pay by check, cash, or credit card.

Fee Change:
\$30/day

- Checks should be payable to: **Miami County Public Health**
- 4) Return payment, application, and supporting forms to: **Miami County Public Health**
510 W. Water St., Suite 130
Troy, OH 45373-2985

Before the license application can be processed the application must be completed and the fee submitted. Failure to complete this application, supporting forms, and remit the fee will result in not issuing the license. This action is governed by the Ohio Revised Code 3717.

Name of Temporary Food Operation

License Application Drawing

Use this page to create your drawing/layout.

A sample drawing is included with this Packet.

Minimum Drawing Requirements

- 1) Hand washing station
- 2) Dish washing station
- 3) Food preparation areas
- 4) Cooking/heating equipment
- 5) Hot and cold holding equipment
- 6) Waste containers
- 7) Fruit/vegetable rinse station (if applicable)
- 8) Customer service area
- 9) Overhead protection (tent, building)

LICENSE APPLICATION QUESTIONNAIRE

Please fully answer each question. If a question does not apply to you, please write
"N/A."

1) At what time will you be completely functional and ready for inspection? _____

2) Describe your hand washing station set-up. _____

3) Describe your 3 compartment dish washing station. _____

4) What type of sanitizer will you use in the third container/compartment?

5) From where will you obtain all of your clean water? _____

6) Is the water from an approved source? (ex: Municipal water)

7) How will you prevent the backflow of water if you are connecting a food quality hose to a
Community spigot? _____

8) Where will you dispose of all waste/gray water generated by your hand washing station, dish washing
station, and food preparation activities? _____

9) Where will you dispose of all trash generated by the food service operation? _____

10) Where will all food, drinks, and ingredients be purchased? _____

11) What kind of equipment will you use to transport cold foods from the source to the temporary food
service operation site? How will these foods stay cold? _____

12) Will **any** food be prepared at a private home or somewhere other than the temporary food service
operation? If yes, where? _____

13) When will the food be delivered or brought to the event? _____

14) Will **any** food be stored at a private home or somewhere other than the temporary food service
operation? If yes, where? _____

15) Is there a gap in time between when the food is prepared and when the food is sold? If so, how long?

16) Will you be using any raw fruits or vegetables? If so, how will you rinse them with water?

17) How will you protect your food preparation areas, service areas, the hand wash station, and the dish wash station from contamination, rain, dust, etc? _____

18) What will you use to keep all food, drink, and utensils at least six (6) inches off the ground/floor?

19) What will you use to prevent bare-hand contact with ready-to-eat foods? _____

20) If any foods will be thawed, what approved thawing method will you use? _____

21) What cooking equipment will you use to cook or heat foods to the required temperatures?

22) What heating equipment will you use to keep all hot foods at or above 135°F after cooking?

23) What cooling equipment will you use to keep all cold foods at or below 41°F? _____

24) How will you monitor cooking temperatures and hot and cold holding temperatures?

25) If cooked hot food drops below the 135°F holding temperature, or if cold food rises above the 41°F holding temperature, what will you do with the food? _____

26) Will you be cooking and then refrigerating food – to be reheated at a later time? _____

27) How will you ensure that all of your food is secure? Will it be locked in a car, building, etc?
